

ACT offers you a wide range of mobile workshops with equipment specific for your activity. These workshops allow you to carry out inspection, maintenance and repair jobs at any time, regardless of location.

Workspaces can be thermally and acoustically insulated (ceiling, side walls, access doors) and can be well ventilated (additional ventilation, fans and additional air conditioning).

Most car workshops need a power source:

- Electric generator of 9 -> 30 kVA installed under the car, operated by the PTO
(To be ordered incorporated with the base car);
- Electric inverter 300 -> 5500 Watt, preferable connected to an additional battery;
- In the case of electric cars, it is foreseen that we can take electricity directly from the main battery of the car;
- Electricity for the inverter can be produced by the engine or by solar panels;
- Electricity can be stored in an additional classic lead- or lithium-ion battery

These power sources can power:

- Additional heating and/or cooling;
- Air compressors (with piston or screw);
- Welding devices;
- Lights/Signalization;
- Water pump;
- Laboratory equipment;

Inside we can mount:

- Workbench, steel or aluminum furniture, supports for storing various tools and materials, computer supports;
 - Winch;
 - Extension cords, cables and hoses;
 - Oil tanks (for fresh or used oil);
- All these workspaces can be designed and configured according to the specific activities of your company.
