

Double cab

ACT has developed for almost every model of Large Van a double cab. Those double cabs are designed to comfortably transport five, six or seven people in combination with a large separated loading space, making the vehicle ideal for families and entrepreneurs. The cargo space can be protected with multiplex and/or poly ethylene panels to avoid damage to the bodywork.

Features included in the conversion:

- 3 (Cruise-cab) or 4 (4-cab) individual seats, on the second row, with headrests, and assorted textiles or leather.
- The stylized partition wall made of ABS material is equipped with a light-coloured glass and an integrated seat support.
- Our cabins give the possibility of loading under the second seat-row of objects with a width of 1.45m and a length up to the rear doors.
- Standard equipped with safety belts according to European standards.
- Multiplex anti-slip floor in the double cab compartment and in the cargo compartment.

Options:

- 1-4 folding armrests for the Cruisecab model.
- Windows for the double cab compartment, if not provided by the factory.
- 35% dark foil, this film blocks 95% of the UV rays and 65% of the heat.
- Multiplex or poly ethylene panels for the cargo compartment
