

There are several types of luggage racks for the Medium Van with overhead roof. Inside, under the roof, transverse supports are installed on which the trunk is installed.

As with the Medium Van with a normal roof, the luggage compartments are galvanized to provide optimal corrosion protection.

In the standard version, a spoiler is also installed to ensure a minimum level of noise. This type of spoiler has been designed in collaboration with the University of Louvain.

Optionally, we can install a stair drum made of robust 1.50m galvanized pipe attached to two ball bearings.

**Trunk dimensions (interior):**  
(length x width in mm)

- Medium Van with high wheelbase: 3027 x 1450
