

For the Small Van we developed an optimized roof-rack.

- This type of roof-rack is made out of steel profiles and is galvanized, both inside and outside. This eliminates corrosion. (Fig. 1.1)
- In the front of the roof-rack, we integrated a spoiler. The form has been optimized in collaboration with the University of Louvain, in order to reduce the noise and fuel consumption.

- Optionally, we offer you a roll, an aluminium walk-surface, various types of fastening, etc

Dimensions L1: (length x width in mm)

- 2200 x 1100 (for car with rear doors)
- 2000 x 1100 (for car with tailgate)

Dimensions L2: (length x width in mm)

- 2670 x 1100 (for rear door model)
- 2470 x 1100 (for model with tailgate)
